

Change Healthcare Enterprise Viewer™

Enable fast clinical insights

Given the volume of imaging data available today, efficient data consumption has become just as important as data accessibility. To improve outcomes, clinicians need to quickly locate and analyse all relevant clinical information. They don't have time to waste sorting through records or searching for connections.

The Change Healthcare Enterprise Viewer aggregates data from disparate sources to present the entire care team with meaningfully aligned clinical imaging content. Our scalable enterprise viewing platform provides all clinical specialties, including Cardiology, with the precise data they need within their existing workflow – improving operational efficiency.

Referring physicians and care team members have immediate access to the patient's complete clinical history, with images presented in the ideal clinical state based on the clinician's function. The viewer provides deep insight into the patient's condition, helping the care team efficiently detect patterns, make diagnoses, and determine the most appropriate treatment plan.

Optum

An interactive view of the patient's complete clinical history

Flexible enterprise platform gives physicians immediate clinical value in the fewest number of clicks – while containing infrastructure complexity and costs

Intuitive access to clinical data

The Change Healthcare Enterprise Viewer offers fast, relevant clinical insights. The viewer's interface was built for design, performance, and accessibility, blending imaging and clinical information in a meaningful manner.

The platform is optimised for clinical data consumption of the patient's complete longitudinal record. Developed in collaboration with more than 100 clinical care team members, the viewer offers tailored user experiences and default views for each clinician role.

Our innovative Change Healthcare Enterprise Viewer StoryView™ presentation aligns clinical information and imaging data, facilitating seamless disease tracking and quick treatment decisions. Users can review the patient's history via an easily navigable timeline, focusing on a clinical condition or anatomy with one-click visualisations and drill-down imaging and report details.

24/7 Access to diagnostic-quality images

Our zero-footprint viewer is designed to provide anytime, anywhere access for both report- and image-focused clinicians. The platform runs on any standard browser on desktops and tablets, and features right-control menus and touchscreen functionality.

The platform uses hybrid-rendering technology to increase efficiency and save server resources. By automatically matching the image processing capabilities of the user's device, the system delivers diagnostic, full-fidelity images suitable for secondary image interpretation. Image manipulation and StoryView™ measurement tools help users find information quickly.

The viewer connects to multiple data sources and supports DICOMWeb and proprietary optimised connection to Change Healthcare Radiology Solutions™. The viewer is typically launched from the EPR, but can be accessed directly via login.

Simplified operations control

Implementing a single reference viewer for all users, clinical specialties, and data sources results in simplified operations and better cost control. By standardising viewing platforms across image service lines, your organisation can decrease IT overhead, eliminate duplication, and minimise complexity – reducing total cost of ownership.

The viewer can also help you realise additional value from existing infrastructure and technology investments, such as data repositories and your EPR. The viewer integrates previously inaccessible, redundant, and siloed clinical information to provide clinical users with a unified view of patient data.

As the viewer is designed for long-term growth in clinical functionality, workflow capabilities, and scalability, it can also enable future enterprise-focused IT strategies.
