

Change Healthcare Stratus Imaging Discover

Organise content to share, collaborate, and educate

Learning is a lifelong process for physicians regardless of their level of expertise or experience. Throughout their professional lives, radiologists, registrars, clinicians, technologists, and scientists obtain massive amounts of knowledge that help them in patient care. As they progress, they gain more knowledge via sharing and collaborating with other physicians. This is how the information is transferred, and radiology trainees and registrars can benefit from it. Sharing firsthand experience in the form of clinical data and images is the best way for everyone to learn and, ultimately, how patients will receive the best possible care.

For use in UK and Ireland

With the NHS Trusts ever expanding in scale across the U.K. it's critical that collaboration and education can be done efficiently. Manually gathering data and images is tedious and time-consuming. Plus, managing and storing the data is a huge undertaking for organisations. Physicians spend hours organising this siloed data to share and collaborate with others to provide knowledge and education.

That's why we designed Change Healthcare Stratus Imaging Discover. It's a cloud-native education and collaboration platform that provides a central content management system to allow healthcare professionals to seamlessly and securely create and organise educational content for teaching conferences or writing a research paper.

Stratus Imaging Discover helps you prepare cases for multidisciplinary team meetings and peer learning conferences. You can also organise, share, and reference cases that are needed on a regular basis. Minimising the effort needed to prepare for presentations, conferences, research papers, and multidisciplinary team meetings serves all types of clinicians by allowing them to focus on patient care—without sacrificing the necessary benefits of collaboration with their peers—both near and far.

Simply put, we designed it to be a game changer—a new way for physicians, researchers, and educators to access data and create, collaborate, and communicate with their peers.

A new way for physicians, researchers, and educators to collaborate

Educate with ease

Some of the features that will help you educate and learn:

- A single, web-based application that all departments can use for clinical education.
- Platform provides effective, interactive, comprehensive, and consistent educational materials.

 [Visit us to learn more](#)

* Stratus Imaging Discover is for educational purposes only. The clinical data being shared should not be used for making diagnostic decisions

Optum

- Compatible with DICOM and non-DICOM; ideal for multi-disciplinary boards, internal users, and educators.
- Flexible interface for educators to create materials for radiology registrars and peer learners.
- Designed for clinicians who want to efficiently organise and share images and reference case information for training and conferencing.

Collaborate without limits

Some of the features that will help you collaborate and share:

- Flexible knowledge management system to enable sharing of enterprise data.
- Seamlessly connect data and people; integrates fully with Change Healthcare Radiology Solutions and Change Healthcare Stratus Imaging PACS
- System supports additional documentation for patient cases: image data, reports, or other ancillary content to provide a holistic patient story.
- Collaborations and interactions are safer with cybersecurity measures in place.

Maximise your resources

Some of the features that will help you optimise your time and investments:

- Optimise operational efficiencies and improve patient throughput; a fully integrated reference case management solution allows your imaging specialists to organise and share images and easily reference cases during daily practice.
- Staff can allocate less hours to preparing for rounds and presentations.
- Cloud-supported maintenance (updates, patches, quick fixes) applied remotely via centralised cloud servers.
